

Managed Security

The Hassle-free Way to Keep Your Business Safe from Cyberattacks

Give Your Business a Boost

Managing IT security risks, and compliance to keep your business and customer data safe is a full time job. You already have one of those, so let our cybersecurity experts increase your IT efficiency, defend against threats including ransomware, and keep you focused on driving business growth.

Increase Efficiency and Growth

82% of businesses report a shortage of cybersecurity skills.¹ Let us take the weight of cybersecurity off your shoulders with complete oversight of your security posture from an expert team 24/7. We provide everything you need to stop cyberthreats with budget friendly pay-monthly options.

Stay Up-to-Date and Out of Danger

60% of SMBs that are hacked go out of business in six months.² Old or unsophisticated anti-virus or encryption software is like a ticking time bomb, especially for remote employees. Our solutions are cloud-based and continually updated to protect against the latest threats from any location.

Reduce Risks and Financial Impact

43% of SMBs lack a cybersecurity strategy.³ Our experts can help you grow with strategies that build trust in your brand while protecting customer data against threats and reducing the financial impacts of failing to meet compliance standards, including GDPR, HIPAA, PCI and NIST.

What we do to cut security and financial risks

- ✓ Meet compliance needs including GDPR, HIPAA, PCI and NIST
- ✓ Protect against data loss including ransomware
- ✓ Encrypt emails and attachments for secure communication
- ✓ Secure home and office laptop and desktop computers
- ✓ Extend protection to smartphones and tablets
- ✓ Keep servers and other network devices safe from threats
- ✓ Connect remote workers to office systems securely
- ✓ Block email spam, viruses and phishing attacks
- ✓ Help users work safely with automated security awareness training

Delivering Complete Cybersecurity Efficiently

Our layered cybersecurity approach delivered from a single console keeps our teams efficient when managing your IT security—making it easier for them, and more cost-effective for you.

Device Protection

Secure endpoints such as servers, personal computers, and mobile devices from ransomware, exploits, and other advanced threats. Prevent users from plugging in unapproved devices, and visiting inappropriate or dangerous websites.

Network Security

Firewalls secure the heart of your network and provide a secure point of connection for all wired and wireless computers, servers, and mobile devices that access the Internet. Stops threats from entering the network and helps ensure users on the network are protected and compliant.

Email Protection

Trust your inbox again. Protect sensitive information and your employees from phishing, impersonation attempts, spam, and malware attacks. Integrates with a range of email providers including Microsoft Office 365, and Google Workspaces, and Gmail.

Device Encryption

Ransomware attacks are growing in popularity and getting more and more sophisticated. Ransomware file protection, automatic file recovery, and behavioral analysis mitigate these attacks, or recover if an attack slips through.

Wireless Protection

Remotely manage and secure wireless networks—even if they are distributed over many locations. Threats on and to your Wi-Fi networks are instantly classified and prevented to keep your users, visitors, contractors, and guests secure.

Security Awareness Training

A solid security awareness program is an integral part of any defense-in-depth strategy. Educate and test your users through automated phishing simulations, security awareness training, and actionable reporting metrics.

Cloud Security

Secure cloud workloads, data, and apps from the latest advanced threats and vulnerabilities. Layered security combines posture management and compliance, firewall, and cloud workload protection to enable organizations to move fast and stay secure in the cloud.

Extended Detection and Response

Extended detection and response gives us complete oversight across all networks and devices to identify and remotely access devices that have performance issues to address compliance issues and track and remediate threats.

24-7 Security Monitoring

Our fully managed, 24/7 threat hunting, detection, and remediation service keeps threats at bay. On your behalf, we work directly with an elite team of experts at Sophos, who detect, investigate, and confirm threats.
